

Customized Electronics

AURORA Electronics, formerly Electronic Equipment was founded in 1979 as a shop for electronic components and audio equipment. Since 1983 we have focused on design, production and maintenance of electronic control circuits for industrial companies.

We find creative customized solutions for soft- and hardware issues in close cooperation with our customers. We take care of the entire development process from development to serial production.

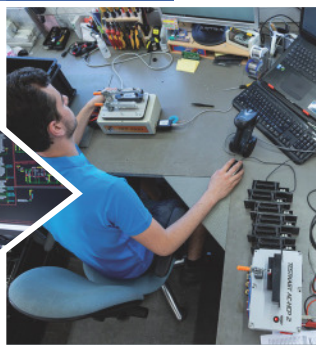

Since 2018, we have been part of the Aurora Group, with branches at 6 different locations in 4 countries.

What we stand for:

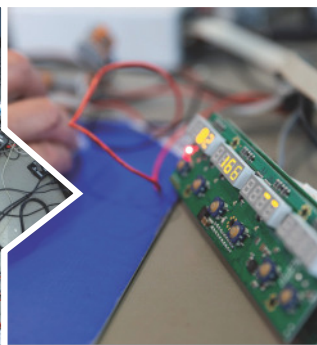

- short communication lines
- low overhead
- great commitment
- creativity in coming up with customer-oriented solutions
- versatility in coordinating and executing production
- high quality standard (automotive certified)

Research and
development

Repair /
Service

AURORA Electronics offers their customers all steps of production from a single source. By keeping everything under our own control from design, prototyping, serial production to delivery, we can work in a fast and flexible manner and our changeover times in production can be set very short.

Customized Development of Electronics

We offer a wide range of services to our customers: From engineering to very modern production and testing facilities, they can rely on our quality promise: By having all steps in our own hands, we can guarantee our high-quality standards for each step – from development to serial production.

Certified Quality:

AURORA Electronics, i.e. the former Electronic Equipment has been automotive certified since 2008 and thus meets the highest international requirements in terms of both: business and production.

Furthermore, we currently working for the certification according to ISO9001 and ISO14001, which will be completed by mid-2020.

Prototyping and Production made by AURORA Electronics

Prototyping according customers requirements:

Especially for realizing prototypes within developing projects, our customers determine the single production steps, that we record in our ERP system. Solder profiles or climate test results i.e. can be handed over on request for customers evaluation.

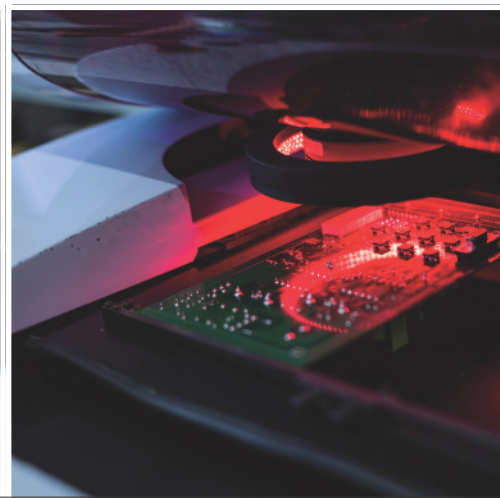

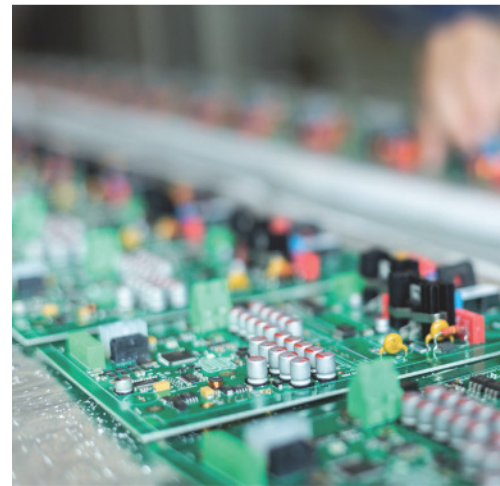

Automated Serial-Part-Production:

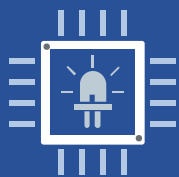

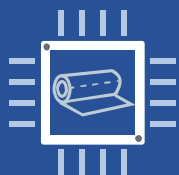

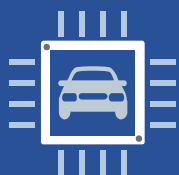

Our customers can rely on our highly automated production. Of course, our most modern production equipment is regularly inspected by its manufacturers, in order to guarantee its perfect functioning. As a matter of course all production equipment used meet the requirements of relevant calibration and verification certificates.

High-Quality Products:

We count on close cooperation with our customers. Combined with our experience in development and production, this results in products at highest quality standards. Our PCB assembly is based on the latest technology with SMD components.

This is also proven with our fall-out rate, that is less than 1 %.

Our Markets & Products

We are active in very different sectors, such as automotive, air and climate control, food and packaging industry, agricultural sector and as a producer of LED lighting.

Climate Controller for Automotive Industry and Commercial Vehicles:

From simple stand-alone speed and valve controllers to full CAN-operated systems, our products are applied e.g. in busses, tractors, planting and seeding machines, loaders and excavators, closed livestock cars, military vehicles, electric cars etc.

Controllers for Food and Packaging Industry:

Our controllers are implemented in protective packaging equipment e.g. airfoil or paper shooter machinery.

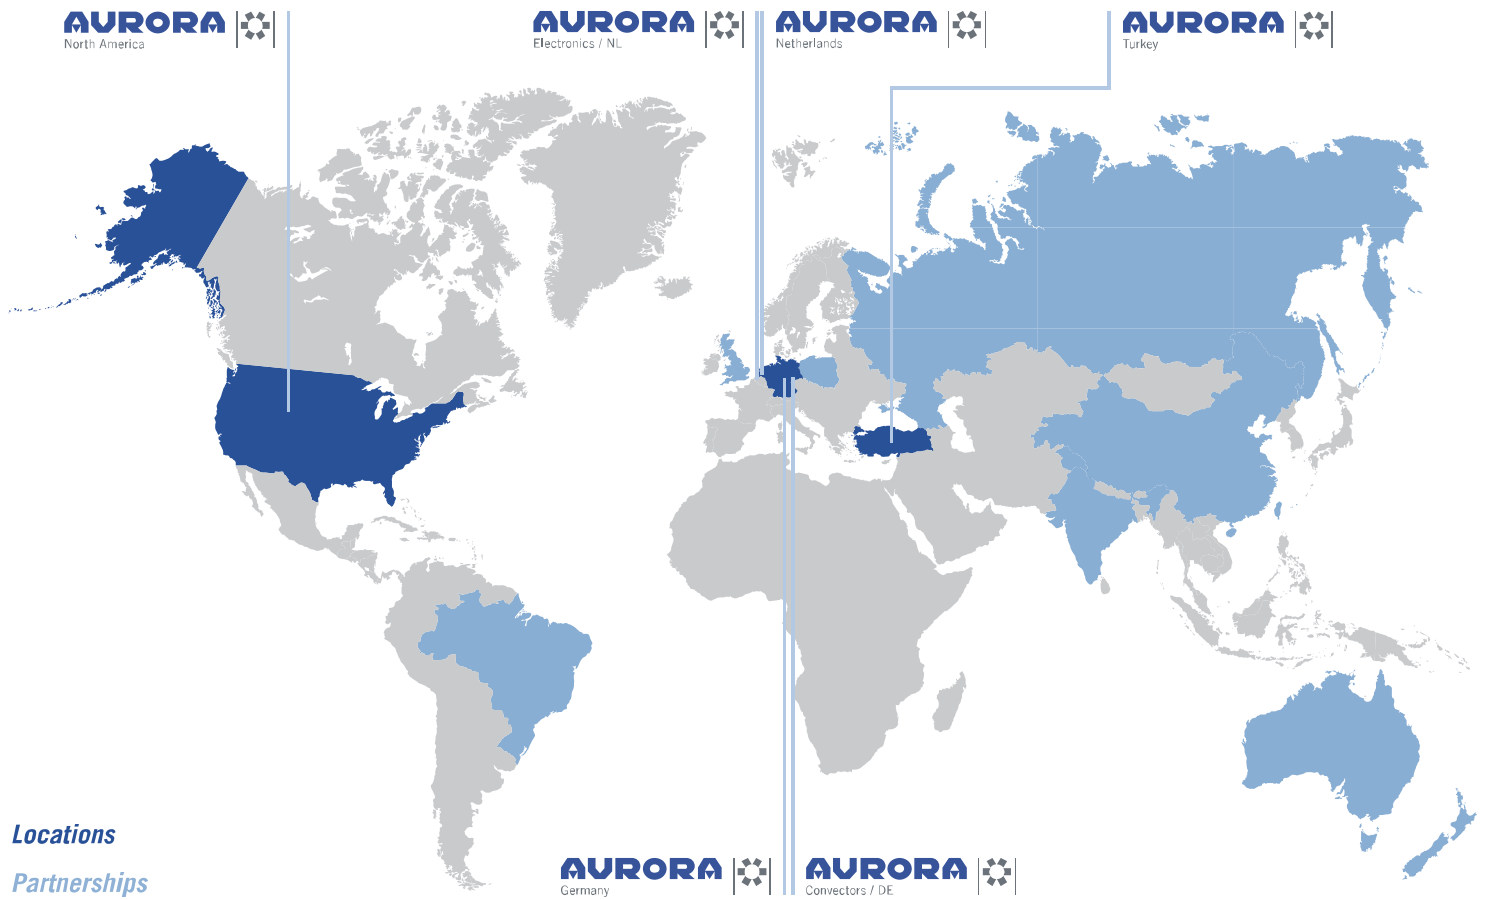

Controllers for Music Industry:

E.g. controllers for vibraphones.

Power LED lighting for various fields of application:

Our product range includes not only stand-alone products as downlighters, high bay lights, gallery and in-line LED lighting but also full-intelligent solutions for car parks and department stores.
